

## Spring Team Luncheon Includes UT Southwestern Research Staff

*PCRI and UT Southwestern research staff enjoy lunch at the Fort Worth Botanic Gardens.*

When Dr. Mark DeHaven joined the PCRI Team in January of this year, he had been working with an excellent research team from UT Southwestern in Dallas. Since many of the projects and grants he continues will require a time of transition, both teams have been working together to facilitate the move.

Both teams and their leaders came together with a joint Spring/Team Luncheon in April with a gorgeous afternoon at the Fort Worth Botanic Gardens. The day was perfect and friendships developed to ensure a successful team union.

*"If you want to be **successful**, it's just this simple: Know what you're doing. Love what you're doing. And believe in what you're doing". -- **Will Rogers***

## PCRI WORK STUDY STUDENT GRADUATES

Stephen Baird has devoted many hours of work at the PCRI in the last fifteen months. "Stephen has been a valuable member of the PCRI during his time with us. He has done outstanding work on multiple PCRI projects, and we will miss his contributions", says Dr. Kimberly Fulda, DrPH, PCRI Associate Director. He will be graduating with an MPH in epidemiology this month and his work study with the PCRI will be coming to an end.

Mr. Baird will be starting the DO program at TCOM in July and will possibly pursue a career in pediatrics. He also volunteered at Cook Children's Hospital for the last two years while pursuing his Masters. Stephen received a BS in biomedical sciences from Tarelton State University.

"I've gained a great amount of experience and comfort communicating with patients/participants", says Stephen about his experiences at the PCRI.
